IHM CORE VALUES (RELEVANCE)
MS. SONAKSHI DHARGALKAR, OFFICE STAFF

Relevance" refers to the processes for monitoring the relevance and practical usefulness of existing statistics in meeting users' needs and how these processes inform the development of statistical programs. Narrower concepts: Relevance - completeness; Relevance - user needs; Relevance - user satisfaction.

- **Relevance - Completeness** refers to the extent to which all statistics that are needed are available. The measurement of the availability of the necessary statistics normally refers to data sets and compares the required data set to the available one
- **Relevance - User Needs** refers to the description of users and their respective needs with respect to the statistical data. The main users (e.g. official authorities, the public or others) and user needs should be stated, e.g. official authorities with the needs for policy indicators, national users, etc.
- **Relevance - User Satisfaction** refers to the measure to determine user satisfaction. This concerns how well the disseminated statistics meet the expressed user needs. If user satisfaction surveys have been conducted, the domain manager should mention them. Otherwise, any other indication or measure to determine user satisfaction might be used
